

Application No.: 10/666,933
Amendment Dated: February 9, 2006
Reply to Office action of: January 9, 2006

Amendments to the Specification:

Please replace the bracketed portions in the abstract of the invention with the underlined portions as instructed by the examiner in the Final Action. The abstract of the disclosure is objected to because the word "Cosmetic" in lines 8 and 10 should not be capitalized.

ABSTRACT[:]

A very thin, flexible and light weight transparent plastic that replaces a broken side and/or rear window for temporary use or pleasure. This durable and clear plastic can keep cold air and rain out of the interior of the car, and when needed, it keeps heat and air conditioning inside of the vehicle. Its primary design is to prevent easy access to automobiles with broken or damaged windows. This strong, but durable transparent plastic covering fits snug and tight into the creases of the vehicle's window frame. A strong, clear adhesive is used to help support the plastic window covering, in order to keep it securely in place. The plastic window covering is also called a [C]cosmetic window covering, because it can be used fashionably, as well as a necessity. The window covering can be used in various shades of tinted colors, for the purpose of fashion, privacy and style. [Perforations are included into the outer perimeters of the Cosmetic window covering, in order to reduce the size, in order to fit other makes and models of automobile door window frames]. The great thing about this invention is that—once carefully crafted and designed to fit once side of the car's side door window frame—it can be used to fit the opposite side of the same car's window frame.
